

Golden Copy

Product Datasheet

The Golden Copy module provides File to Object sync tool to create a master copy of a data in Object Storage

Superna Eyeglass©

Golden Copy

The software only solution provides a high performance file to object sync/backup/archive platform.

Available in 2 Editions

1. **Golden Copy basic** - Everything you need to backup, archive and recall data to on premise or cloud storage
2. **Golden Copy Backup Bundle** - Optimized for backup and restore with advanced features. See [here](#).

Key Features

1. High performance File to Object with Scale Out VM option
2. **“NO VENDOR LOCK IN”** native file copy allows access to your data with any S3 tool, no requirement to use Golden Copy to access **“Your data”**

3. Cost reduce your backup software licensing to make simple copies of your data without the cost and complexity
4. Full include, exclude of paths or file extensions example *.tmp, *.swp
5. Rate limiting features to control bandwidth of the copy
6. Native Amazon, Azure, Google Object SDK implementation, enables access to all advanced features of the target storage.
7. Multipart uploads and download supported for maximum performance of large file copies
8. Scheduled full or incremental always using snapshot change list technology
9. File owner, group, mode bits and folder ACL's are protected S3 Object metadata enabling a “databaseless” design
10. Checksum option stored as S3 metadata for data integrity checking
11. **Incremental sync Offload** - Isilon/Powerscale hardware

Golden Copy

Product Datasheet

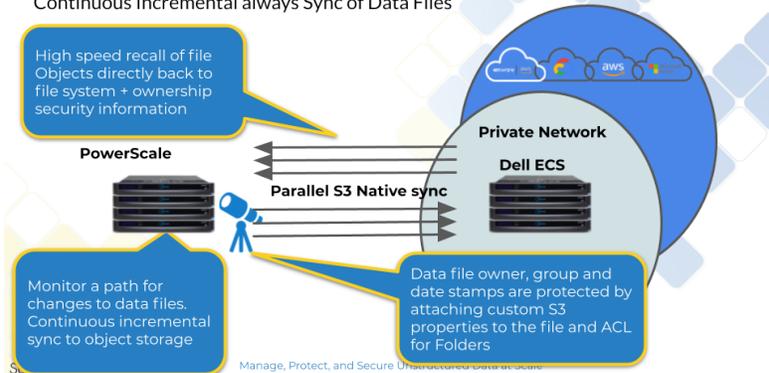

The Golden Copy module provides File to Object sync tool to create a master copy of a data in Object Storage

changelist support offloads snapshot comparison to Isilon hardware for faster incremental sync performance.

12. Licensed Per Cluster, no per GB or TB fees
13. Backup Bundle or Upgrade with the Advanced License offers
 - a. Cloud provider tier aware copy places data directly into storage tier to avoid transition costs
 - b. Version aware recall of data based on data range
 - c. Full copy mode automatically creates full copies integrated with lifecycle policies for age out data
 - d. Integration with Ransomware Defender with “Smart AirGap” notification to pause copies based on threats to source data
 - e. Redirected recall to target clusters other than the copy source
 - f. REST API to enable copy workflows from external

applications.

Golden Copy - A File to Object Archive, Data Recall
Continuous Incremental always Sync of Data Files
