

Search & Recover Addon Data Marshal

Product Datasheet

Customers with massive repositories of file data need an end user simple archive solution to on site or Internet archive storage. Data Marshal is a <u>no</u> <u>compromise</u> solution that ensures archive data is **secured** throughout its entire life cycle.

Superna Eyeglass©

Data Marshal

Managing billions of files requires Enterprise solution to manage the life cycle of this data from active state to warm archive to cold archive storage.

The solution maintains an index of all active and archived data and leverages Dell EMC Isilon Cloudpools for seamless nearline and long term archiving of stale data.

Key Features:

1. NO Compromise Security for Archived Data - Archive data is fully secured and protected by Superna Data Protection suite. Realtime protection of user access to archived stub files from Ransomware Defender and full file audit capabilities with Easy Auditor

- Content Aware Archive archived content can be full text indexed before archiving for simplified searching of archived data.
- 3. Self Serve User data archive provides AD Integrated secure access for users to archive data without assistance
- 4. Integrated Security with Primary Storage Isilon SMB & ACL security is automatically imported so that archive and search access is secured once on the primary storage.
- 12. Suggested Archive reports for users simplifies user archive with personalized user suggested archive file reports with "Single click" archive
- 13. Data lifecycle policies
 embedded in the Onefs custom metadata is attached to
 the file system itself on how data
 should be archived to near line or
 long term archive locations.

Product Datasheet

Customers with massive repositories of file data need an end user simple archive solution to on site or Internet archive storage. Data Marshal is a <u>no</u> <u>compromise</u> solution that ensures archive data is **secured** throughout its entire life cycle.

Metadata is protected by Isilon snapshots and replicated with SynclQ. This means policy data is **not stored in a centralized database** and is retained in the file system where it belongs

14. Cloud Archive Gateway for
Long Term archive data stubs
are moved to a location that users
do not have access to ensure
stale data is not easily retrieved
from the public cloud. For public
cloud data access, SMB shares
can be created on long term
archive data Cloudpool stubs to
allow a Cloud Archive gateway to
access long term data easily
without loss of security, data
protection, auditing capabilities.

- reporting
- 3. Lower the cost of file based storage with integrated data security and protection
- 4. Life Cycle management policies for active, near line or long term archive with integrated seamless access to end users.

Use Cases

- User self serve data archive portal
- 2. Administrator Archive and
